WHAT'S CHANGED?

For euro 6 models with start stop technology, the potential of increased wear on the chain due to the additional engine cycles throughout the vehicles life has increased causing elongation and premature failure on original chains covering 40,000 miles or less. The new chain design from BGA has additional oil feed holes allowing increased lubrication between the chain bush and pin which results in less friction, therefore prolonging the life of the chain.

As well as this, BGA uses OE (original equipment) parameters and tolerances as the mandatory MINIMUM requirements to pass our quality controls – meaning that our components can and will often surpass the quality of Original Equipment.

Close up of the oil feed holes on BGA's TC0381FK Chain fitting the 1.3 Multijet engine.

TEST RIG SIMULATING REAL LIFE MOVEMENT.

Custom built in BGA's Research & Development center, this machine is capable of running for millions of miles and is the 'go-to' machine when it comes to vigorously testing the quality and longevity of BGA Water Pumps against the OE alternative.

The rig has been built to simulate the drive of an internal combustion engine, containing Sprockets, a BGA Water Pump, Tensioner and a BGA Timing Belt all run by an electric powered motor controlled by bespoke software.

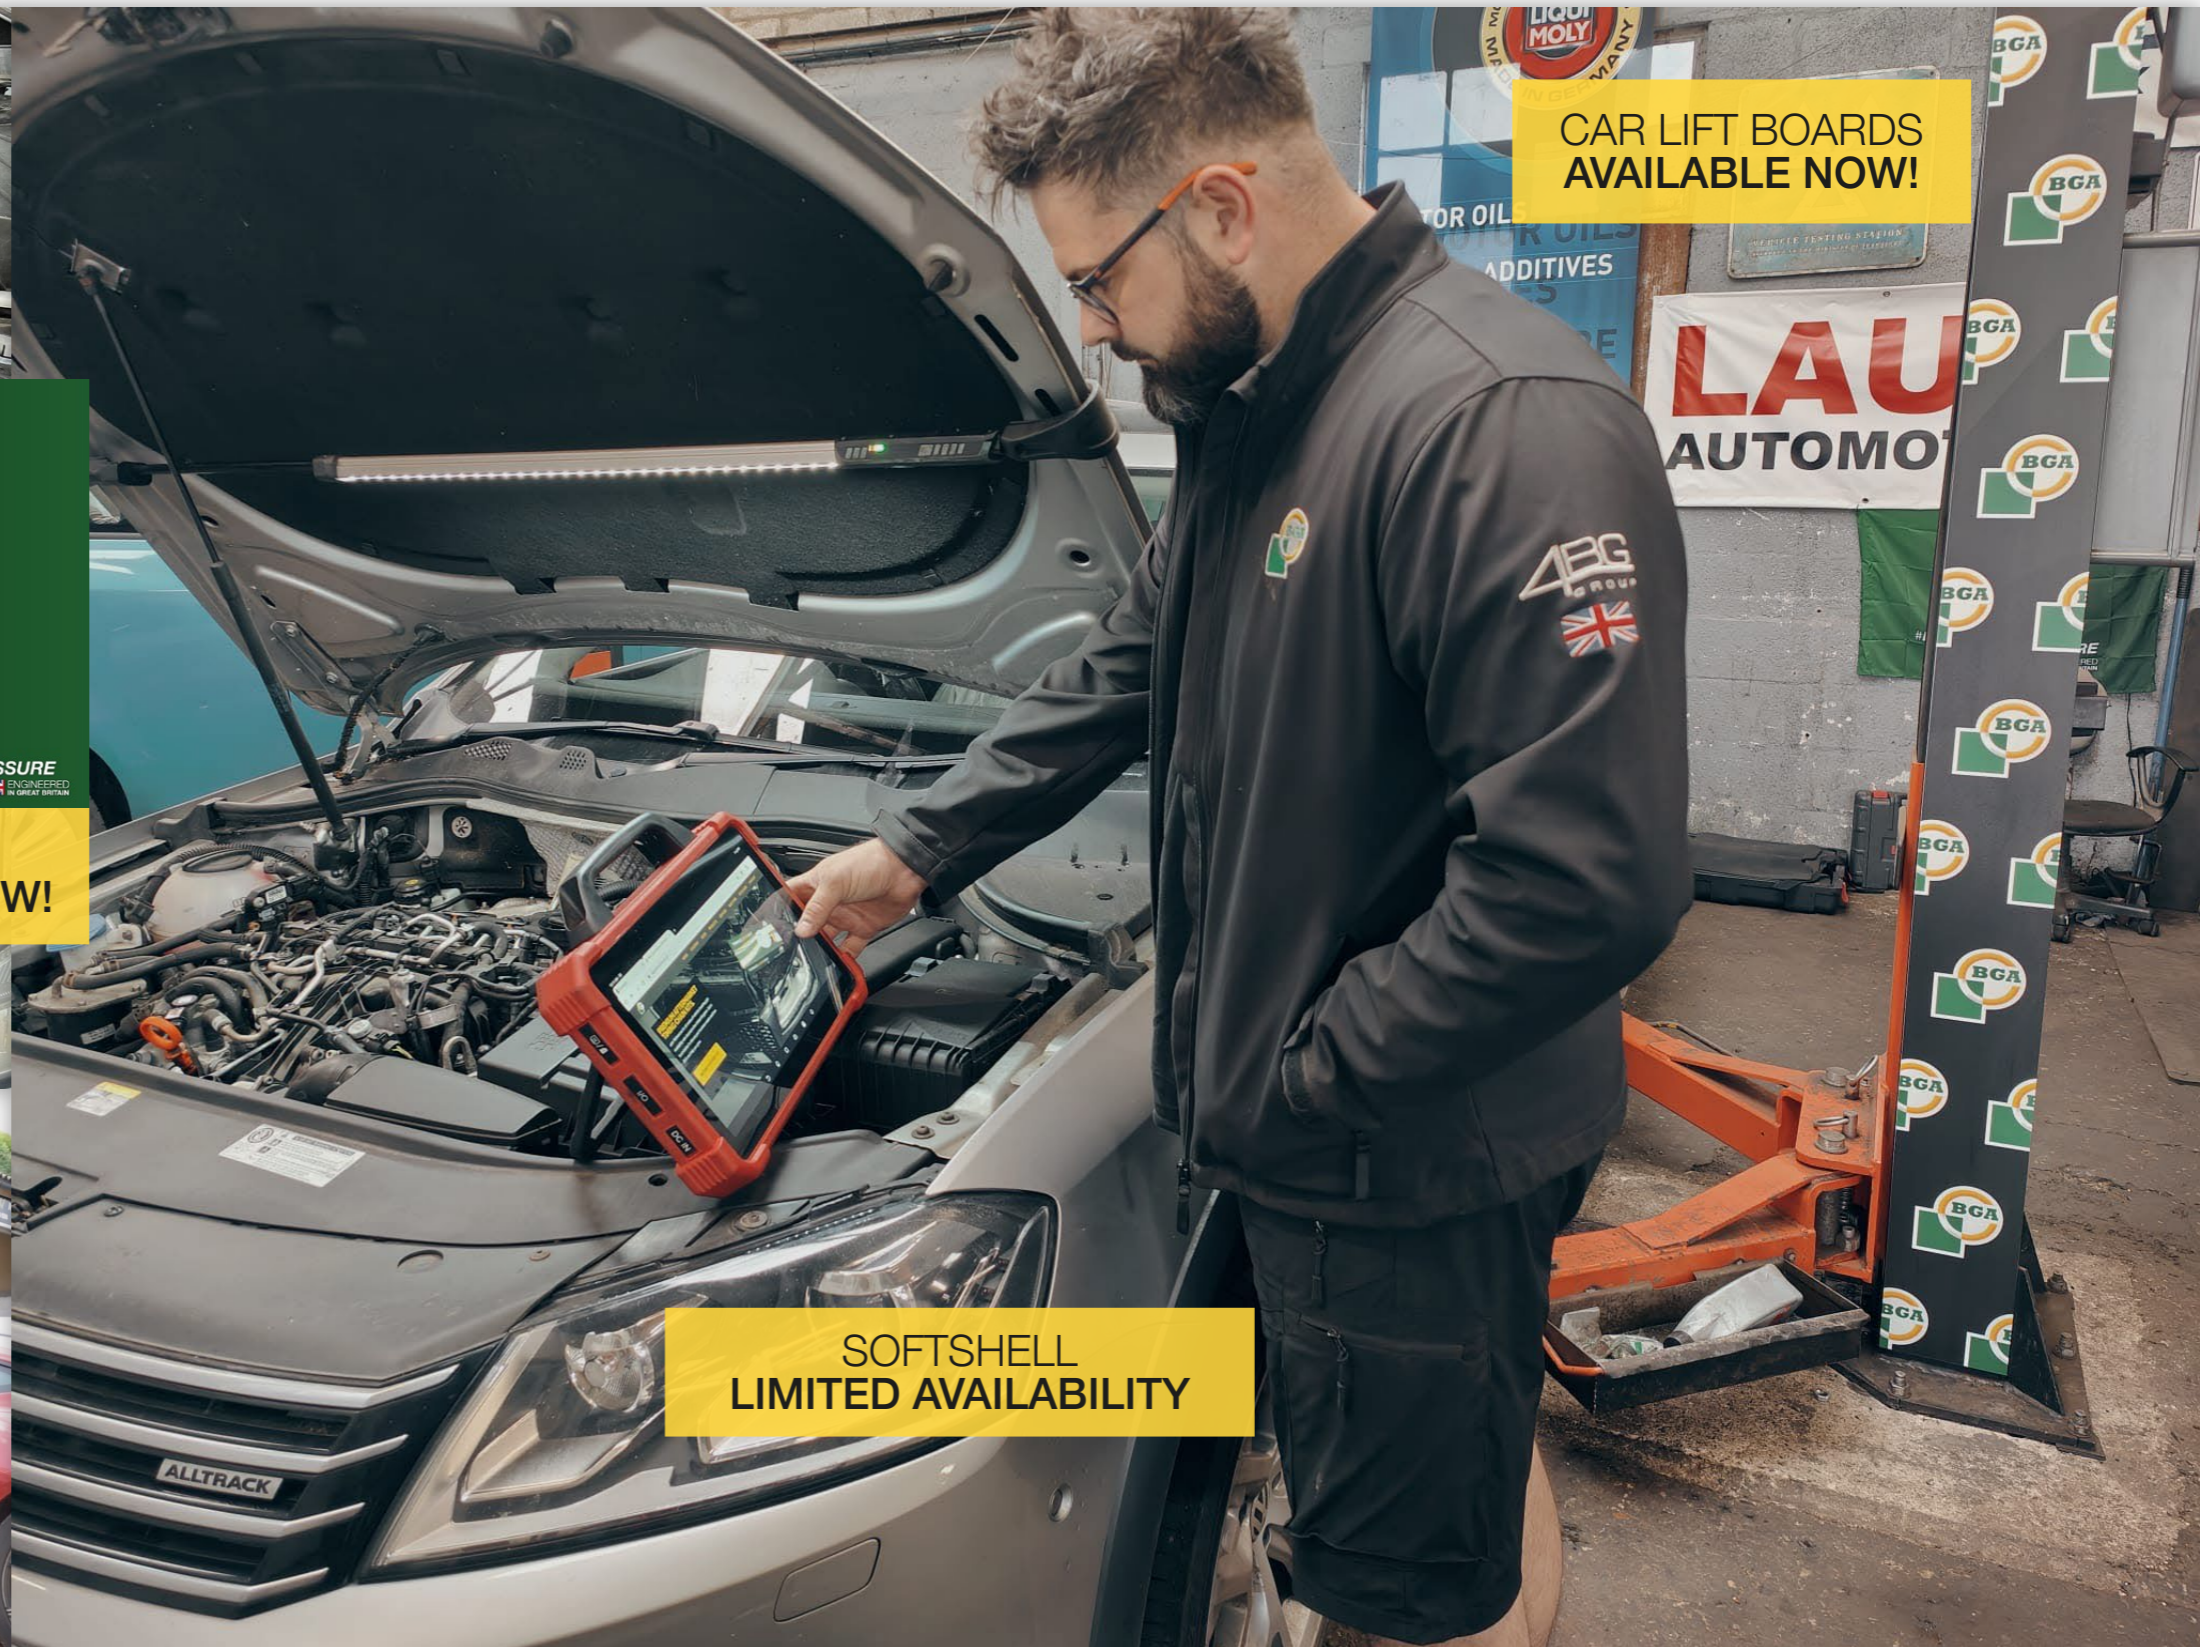

The motor has been programmed to endure the capabilities of simulating anywhere from 0-9000RPM, and is able to slow down/speed up as a typical running vehicle would do.
