BGA LAUNCH ENGINE VENTILATION RANGE

UK Market Leaders.

Rocker Cover function on an engine:

The rocker cover, or valve cover, shields valve train components, preventing oil leaks and ensuring lubrication, thus enhancing engine longevity and efficiency.

Inlet Manifold function on an engine:

An inlet manifold distributes air or air-fuel mixture to engine cylinders, optimizing combustion and performance.

Both parts play crucial roles in maintaining the engine's operational integrity and efficiency.

Why BGA when choosing a reputable, high-quality Engine Ventilation supplier?

- Largest Engine Parts supplier in the UK.
- Manufactured to meet or surpass OEM standards.
- Thoroughly tested vs. the OE alternative.
- Precision, first time fit.
- 3 Year Manufacturers Warranty.
- Largest relevant range of high quality parts.

All quality testing for Engine Ventilation parts are carried out in BGA's Headquarters in Wiltshire, UK.

Quality Certificates

ISO9001:2015 IATF 16949:2016 Block Exemption

OEM INJECTION MOULDING

BGA is the Aftermarket division of 4BG Group established in 1929, an OE manufacturer with a range of injection moulding manufacturing machines, giving BGA the edge with precision machinery, technical expertise and raw materials when it comes to plastic manufactured parts.

STOCK RECOMMENDATIONS

INTAKE MANIFOLD

With "Swirl Flaps"

The function of the swirl flaps is to control the flow of fresh air into the combustion chamber efficiently at different engine loads and speeds.

It does this by altering the path of which the air travels through the manifold and into the combustion chamber by opening and closing the flaps to direct the air through these different paths. The paths are of different length and cross-sectional area causing the air to speed up or slow down allowing the maximum efficiency/performance of the engine at higher or lower RPM.

Example of carbon deposit build up.

The bad bits:

Intake manifolds can become blocked with carbon deposits from the combustion process. These soot-like deposits can harden and restrict the flow of air into the engine causing lack of power, hesitation, poor fuel economy and eventually damage to the intake manifold flaps and even the motor or valve that controls them.

BGA Recommend

When replacing the manifold, we recommend that the motor or valve that controls the swirl flaps is checked prior to replacement of the manifold to ensure it has not been damaged due to the flap movement being hindered by the carbon deposits on and around the swirl flaps. It is also advised to check the throttle valve and inlet valves for further carbon deposits and clean where necessary.
