

A WHOLE IS GREATER THAN THE SUM OF ITS PARTS.

WHY CHOOSE OUR WATER PUMPS?

01 MANUFACTURE

To ensure the upmost quality, our Water Pumps are manufactured using the latest technology in our state-of-the-art facilities. We are insistent on employing stringent quality control inspections throughout the process, ensuring our Pumps continue to outperform in the aftermarket.

Range features include:

- Corrosion resistant aluminium and steel impellers used in excess of 99% of the BGA Water Pump range. This provides better longevity than the standard plastic alternative.
- OE quality Silicon Carbide mechanical seals increase service life of BGA Pumps that are subject to demanding environments.
- High quality NBR rubber o-ring seals provide excellent compression set increasing durability.
- BGA Water Pumps encompass high torque precision bearings with PA polymer cages for high operating speeds. This, accompanied by high temperature grease, offers the complete package.

02 TESTING

Water Pumps from BGA are tested to meet or exceed OE standard service intervals using simulated real-world driving conditions.

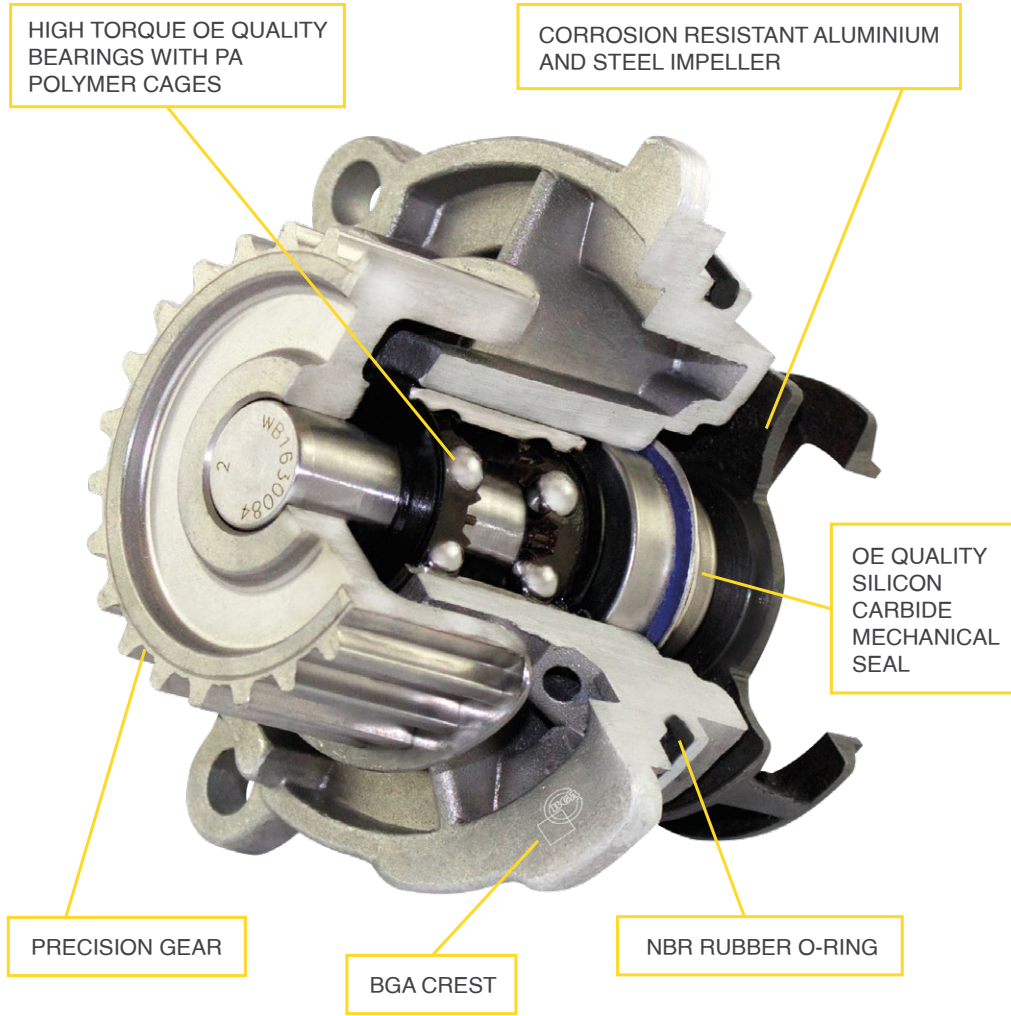

This rigorous procedure includes endurance and performance testing, alongside dimensional accuracy inspections; all of which is carried out by our experienced Technical Engineering Team.

03 SUPPORT

Our dedicated Technical Engineering Team offers customers front-line support for all technical queries on our products during working hours. This accompanies our Technical Bulletins and Fault Diagnostic Manuals available online.

04 PROGRESSION

At BGA, we are always looking to define refine our range. To ensure this is achieved, we employ the latest OE comparativeand technology into our Water Pumps.
